Title	SLAM_Rescue Robot Chassis Design FEA
Author	Hariharan Ganeshkumar

Simulation Model 1

Study 1 - Static Stress

Study Properties

Study Properties	
Study Type	Static Stress
Last Modification Date	2026-04-20, 02:45:37

Study Setup

Settings	
General	
Contact Tolerance	0.10 mm
Remove Rigid Body Modes	No
Mesh	
Average Element Size (% of model size) - Solids	10
Scale Mesh Size Per Part	No
Average Element Size (absolute value)	-
Element Order	Parabolic
Create Curved Mesh Elements	Yes
Max. Turn Angle on Curves (Deg.)	60
Max. Adjacent Mesh Size Ratio	1.5
Max. Aspect Ratio	10

Minimum Element Size (% of average size)	20
Adaptive Mesh Refinement	
Number of Refinement Steps	0
Results Convergence Tolerance (%)	20
Portion of Elements to Refine (%)	10
Results for Baseline Accuracy	von Mises Stress

Materials

ABS Plastic

Components

Component	Strength
Component1:1	Yield Strength
Component1:1/Component3:1	Yield Strength
Component2:1/Body1	Yield Strength
Component2:1/Body3	Yield Strength
Component2:1/Body4	Yield Strength
Component2:1/Body5	Yield Strength
Component2:1/Component4:1	Yield Strength
center v2:1	Yield Strength
center v2:2	Yield Strength
side v1:1	Yield Strength
side v1:2	Yield Strength

Properties

Density	1.060E-06 kg / mm^3
Young's Modulus	2240.00 MPa
Poisson's Ratio	0.38
Yield Strength	20.00 MPa
Ultimate Tensile Strength	29.60 MPa
Thermal Conductivity	1.600E-04 W / (mm C)
Thermal Expansion Coefficient	8.570E-05 / C
Specific Heat	1500.00 J / (kg C)

Load Case1 - Guided Results

Safety Factor

With the analysis criteria in this study setup, the design is expected to bend permanently or break.

Next Steps

Below Safety Factor Target

Validate your study setup

- Check the loads are not set too high
- Check the mesh refinement and consider increasing it in areas of high stress
- Confirm your Safety Factor requirement
- If the Displacement result shows high displacement, consider running a Nonlinear study to gain more insight

Check other results

- Examine the Below target Result visualization to see where the weakest areas are
- Check the stress result to see if, and where, the material might yield
- Check the displacement result to see how far from its original alignment the model has moved
- Look at other results, such as reaction forces to check your study set up, or strain to check your material performance

Strengthen weak areas

- Add more material to weak areas
- Select a material with a higher yield strength

Safety Factor
Results
Result Summary
Safety Factor
Stress
Displacement

- Stiffen the design
- Modify the shape with a Generative Design study

Generate alternative designs

- Add more material to weak areas
- Select a material with a higher yield strength
- Stiffen the design
- Modify the shape with a Generative Design study

Above Safety Factor Limit

Validate your study setup

- Check the loads are not set too high
- Check the mesh refinement and consider increasing it in areas of high stress
- Confirm your Safety Factor requirement
- If the Displacement result shows high displacement, consider running a Nonlinear study to gain more insight

Check other results

- Examine the Below target Result visualization to see where the weakest areas are
- Check the stress result to see if, and where, the material might yield
- Check the displacement result to see how far from its original alignment the model has moved
- Look at other results, such as reaction forces to check your study set up, or strain to check your material performance

Lightweight the design

- Set a Safety Factor upper limit to find where material can be removed
- Remove material from areas that exceed the Safety Factor upper limit

Generate alternative designs

- In the Generative Design workspace, create design modifications
- Remove unnecessary material using a Shape Optimization study

Load Case1 - Results

Result Summary			
Result type	Sub-result	Minimum	Maximum
Safety Factor			
	Safety Factor	165.681	592,624.688
Stress
